BOOKING

Maruti Customer Concierge

Hinglish voice-to-booking proof of
concept

Ranjan Sharma

July 2026

**Natural Hinglish in. A confirmed test
drive out.**

The bottleneck is not interest. It is orchestration.

A customer can be ready to test-drive a car — and still drop between the first question and a confirmed slot.

Language, qualification, dealer data and scheduling often live in different steps or systems.
Every manual handoff creates delay, re-keying and a weaker close.

CUSTOMER FRICTION

- ✓ **Hinglish intent is re-keyed**
- ✓ **Qualification gets repeated**
- ✓ **Availability lives elsewhere**
- ✓ **Slots can change before commit**
- ✓ **No booking ID means no closure**

What the demo proves

ONE DEEP ENTERPRISE JOURNEY

A customer speaks naturally, receives grounded choices, and completes a test-drive booking without touching a form.

Hinglish

Model, location, date and time
spoken naturally

1 flow

Model → dealer → slot →
customer details

TD-XXXXXXXXXX

Booking committed and spoken
back to the customer

The customer journey has three controlled moments

The assistant asks for exactly one missing field at a time.

DISCOVER

SCHEDULE

COMMIT

Intent → model → dealer

Natural Hinglish mapped to a grounded catalogue and nearby dealership.

Date/time → location

Capacity checked for the selected model, dealer and slot.

Customer → booking ID

Contact data captured, transaction committed and reference spoken.

Architecture: voice is flexible; booking is controlled

HYBRID CONTROL MODEL

Sarvam powers every voice turn. FastAPI and SQLite control every booking commitment.

[EDITABLE SYSTEM DIAGRAM](#)

VOICE EDGE

Browser VAD and barge-in
Sarvam Saaras v3 STT
Sarvam Bulbul v3 TTS

AUDIO + TEXT

CONTROL PLANE

FastAPI session orchestration
Deterministic state machine
Optional sarvam-30b free-form path

VALIDATED DATA

TRANSACTION CORE

SQLite catalogue and fleet
Atomic slot reservation
TD booking ID + future SMS adapter

Why Sarvam fits this India-first voice journey

The differentiator is not voice alone — it is voice connected to an enterprise transaction.

UNDERSTAND

Saaras v3 turns Hinglish speech into the transcript that drives the workflow.

RESPOND

Bulbul v3 makes each next question and the final booking ID audible.

EXPAND

The same stack creates a path to regional languages, translation and controlled LLM assistance.

SPEECH-TO-TEXT

TEXT-TO-SPEECH

INDIA-LANGUAGE STACK

Illustrative business case — assumptions first

ASSUMPTION-LED MODEL

10,000 interactions/month · 60% eligible · ₹60 assisted cost · ₹12 voice-AI cost

NOT A MARUTI BASELINE

Formula: $10,000 \times 60\% \times (\text{₹}60 - \text{₹}12)$

₹2.88L

illustrative monthly direct saving

₹34.56L

illustrative annualised direct saving

+100

extra test drives/month from +1 point conversion

90 days to a measured two-dealer pilot

PoC boundaries: browser mic · seeded inventory · in-memory sessions · simulated SMS

DECISION: APPROVE THE PILOT

INTEGRATE

Live dealer/fleet source
Sarvam quality evaluation
Security and consent design
Sandbox SMS

HARDEN

Postgres + Redis
Telephony and CRM/DMS
Observability and handoff
Regression suite

PROVE

Two-dealer traffic cohort
Weekly failure review
Funnel comparison
Scale/no-scale gate
